-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 1 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-13 and 19-20, drawn to a tin hydroxide aqueous suspension.

Group II, claim(s) 16 and 21, drawn to a method of reducing Cr<sup>6+</sup> content in cements.

The inventions listed as Groups I do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: Claim 1 is either obvious over or anticipated by Minamoto et al. (JP 02169996 abstract), Inno (JP 2003287908 abstract), Wolfangel (US Patent No. 4,057,616, or Arndt et al. (US Patent No. 4,913,890).

Minamoto et al. teach a suspension used as an anticorrosive coating comprising tin hydroxide and iron hydroxide (see abstract).

Inno teach a suspension comprising tin hydroxide and iron hydroxide (see abstract).

Wolfangel teaches an aqueous suspension that can comprise iron hydroxide and tin hydroxide (see claims).

Arndt et al. '890 teach an aqueous composition/slurry comprising tin hydroxide and iron hydroxide (col.2, lines 1—12 and throughout reference).

It is the examiner's position that the prior art above anticipates applicants' claim 1. Even if not anticipated, overlapping ranges of amounts would have been prima facie obvious to one of ordinary skill in the art. Accordingly, the special technical feature linking the two inventions, the tin hydroxide/transition metal hydroxide aqueous suspension/ solution, does not provide a contribution over the prior art and no single general inventive concept exists. Thus, restriction is appropriate.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.
